

Project 3 Governance Artifacts & Data Schemas

Artifact A: Pre-Order Compliance Automation Requirements Blueprint

Control Reference: NIST SP 800-53 Rev. 5 (CM-9: Configuration Management Plan)

Author: Rueshanna Morris, PMP, PMI-ACP

Purpose: Functional requirement log co-authored to guide Engineering as they transitioned the 23 manual checks into an API-integrated spreadsheet tool.

1.0 System Optimization Parameters

The automated validation tool must systematically ingest active device profile data and cross-reference integration parameters without requiring manual data entry.

2.0 Functional Requirement Tracing Matrix

1. **Steps 1–10 (Harness Compliance Verification):** Tool must automatically ping the core inventory API to verify endpoint hardware baseline alignment.
2. **Steps 11–20 (Sovereign Routing Check):** Tool must validate that the assigned database destination matches domestic hosting perimeters.
3. **Steps 21–23 (Procurement Audit):** System must flag and block e-commerce default bugs, such as unauthorized priority freight selections, to maintain compliance with government procurement rules.

Artifact B: Customer Demand Signal Tracker Data Schema

Control Reference: NIST SP 800-53 Rev. 5 (PM-28: Risk Management Strategy)

Designed by: Rueshanna Morris, PMP, PMI-ACP

Purpose: Data framework engineered to document and quantify previously untracked market demand signals across the division.

1.0 Tracker Data Fields & Object Structure

Every incoming client request for specialized or non-compliant product lines is captured using the following standardized schema:

DATA SCHEMA: CUSTOMER DEMAND SIGNAL TRACKER

- |— RECORD_ID (auto-increment, unique identifier)
- |— TIMESTAMP (DD-MM-YYYY HH:MM)
- |— ACCOUNT_IDENTIFIER (anonymized alpha-numeric hash)
- |— CURRENT_ACCOUNT_TIER (Tier 1 Federal / Tier 2 Public / Enterprise)
- |— REQUESTED_PRODUCT_CATEGORY (Video Telematics / Asset Tracking / Advanced SaaS)
- |— CORE_COMPLIANCE_GAP (FedRAMP Certification Pending / NIST Control Conflict)
- |— EXTENSION_SCALE (total in-field units projected)
- |— PROJECTED_CONTRACT_VALUE (total estimated annual recurring revenue, USD)

2.0 Strategic Impact Analysis

By aggregating these data rows into a centralized SharePoint dashboard, the account advisory team generated a data-backed federal revenue map. This evidence provided management with the quantitative justification used to secure executive buy-in for long-term product roadmap expansion.
